

Danish Lighting Innovation Network

The Danish Lighting Innovation Network is a newly established network which focuses on light and lighting.

The vision of the innovation network is to promote the Danish lighting industry and to support the industry to be at the forefront, when it comes to the global light market and to ensure, that it will dominate a significant part of this - within the next 10 years. Moreover the network will contribute to promoting an innovative usage of light in Denmark in terms of both public and private spaces in connection with quality, design, usability, and sustainability.

The mission of the network is to create a platform for growth by developing improved conditions for education and research. Moreover to strengthen the cooperation between companies, research institutions, and public organizations within different areas of knowledge, market positions, and positions within the chain of value.

The project *Intelligent control of lighting based on daylight, weather forecasts and energy prices* (page 7) is arisen from and funded by the Danish Lighting Innovation Network.
